

How to fix the Can't Initialize Registry problem Windows 7

1. Click on the Start Button. Select All Programs.
2. Use the scroll bar and scroll down the list of programs until you locate the yellow Water Solutions folder.
3. Open the Water Solutions folder.
4. Right click on Fix Registry Error.
5. Click on Run as administrator.
6. Your computer will ask if you want to allow this program to make changes to your computer. Answer Yes. In a moment you should see the following window. Ignore the error.

7. Click on okay. The window should close leaving the following window. Please read the note and press any key. The window should close.
8. Go ahead and start your Water Solutions Program. Your program should start normally.
9. If for some reason during the startup you get an additional notice about the registry values needing to be updated, enter okay.
10. The process should only take a moment to complete and you should be able to start your program.
